INSTALLATION INDEX

1	Preparation	_____	Page 4
2	Mounting	_____	Page 5
3	Install Curtain (Only applicable if curtain is not pre-installed)	_____	Page 11
4	Testing	_____	Page 15
5	Adjusting	_____	Page 16
6	Complete	_____	Page 20

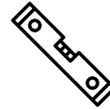

TOOLS YOU WILL NEED

Cordless Drill with #2 Robertson Bit

1/8" Drill Bit
(Pre-drill holes if desired)

4 Foot Level

Ladders (If required for height of the opening)

Lifting Device - For Large Shutters
(Only required if the curtain is not pre-installed)

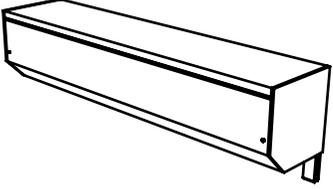

IMPORTANT NOTES

1. The following instructions are meant as a guide to installing your shutter. They cannot cover all applications. You are responsible to use safe work procedures to prevent injury to yourself and others, as well as prevent damage to the shutter. If you encounter a problem or have a question please contact Technical Support at the number provided at the end of these instructions.
2. The legs on the end caps can break. You must take care to not put undue pressure on these legs during the installation to avoid damage.
3. The shutter must be secured to solid backing through the back, top, or sides of the box. Also secure the box housing through the support plates if they are supplied.
4. The shutter has been supplied to be installed onto solid wood backing. The #10 - 2 inch installation screws provided are for mounting onto wood. If you are not installing your shutter onto wood, please substitute these screws for the appropriate fasteners needed for your substrant (backing).

PARTS

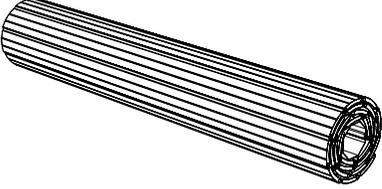

Shutters that weight under 60 pounds will have the curtain and t-clips pre-installed inside the box housing. If the shutter is narrower than the guide rails' height, the guide rails will be in a separate box labelled 'Guide Rails'.

BOX HOUSING **A**

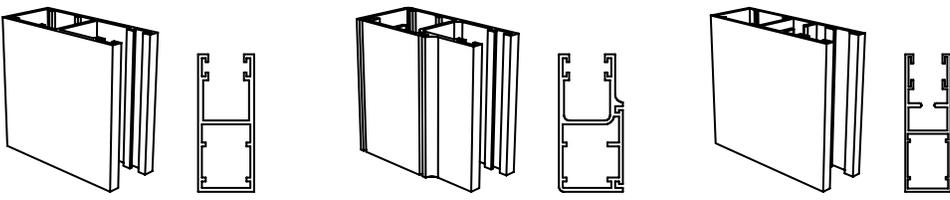

Size will vary depending on shutter height and width

CURTAIN **B**

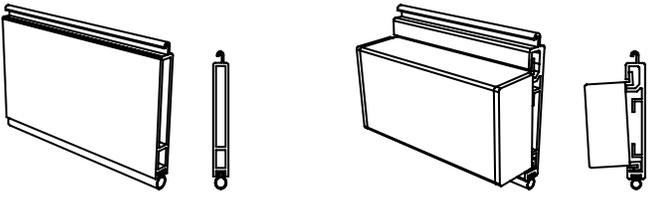

Pre-installed on shutters under 60 pounds

GUIDE RAILS **C**

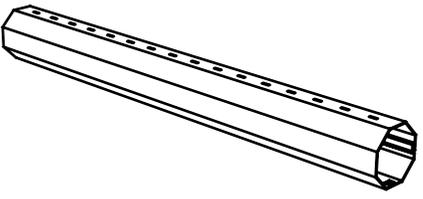

Standard STAX (Buildout) AnchorLoc (End Retention)

BOTTOM BAR (Pre-Installed on Curtain) **D**

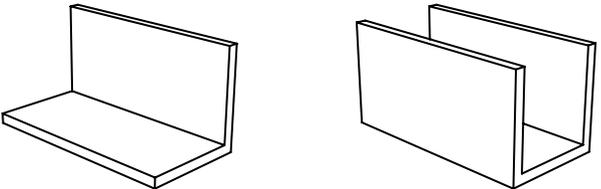

Standard Heavy Duty

AXLE (Pre-Installed in Box Housing) **E**

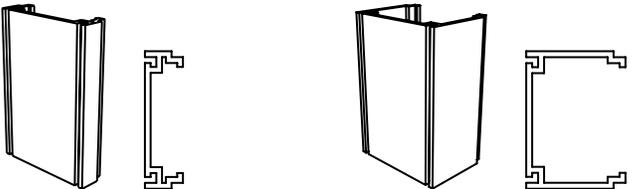

Size will vary depending on shutter height and width

SILL (If Required) **F**

L-Sill U-Sill

STAX - BUILDOUT (If Required) **G**

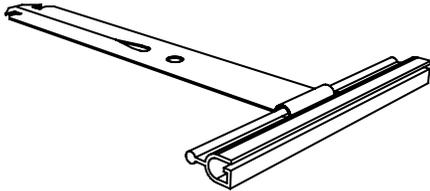

Size will vary depending on requirements

HARDWARE

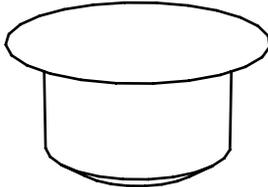

Hardware can be found in the installation package provided with the shutter. If some of the hardware listed below is not included, this means your shutter does not require it.

T-CLIPS **H**

Pre-installed on shutters under 60 pounds

SCREW HOLE COVERS (If Required) **I**

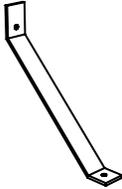

Used to cover screw holes on the guide rails

INSTALLATION SCREWS **J**

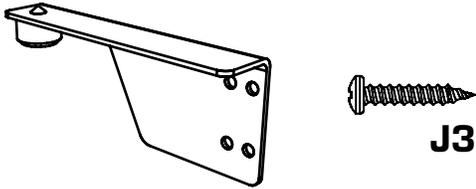

#10 - 2 Inch Screws Tek Screws

SUPPORT BRACKETS (If Required) **K**

Size will vary depending on box housing size

STOPPER BRACKETS (If Required) **L**

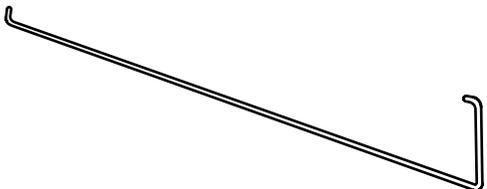

Stopper Brackets Self Tapping Screws

LOCKING KEYS (If Required) **M**

Shutters with a key lock will have keys provided

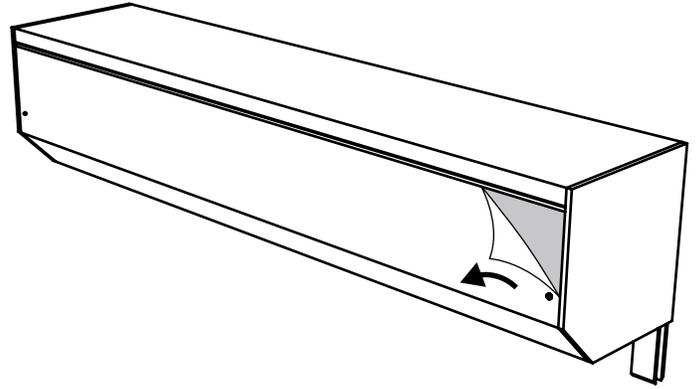

PULL HOOK **N**

Used to pull curtain down for manual operation

1 PREPARATION

1. Remove the protective plastic on the exterior of the box housing (A).

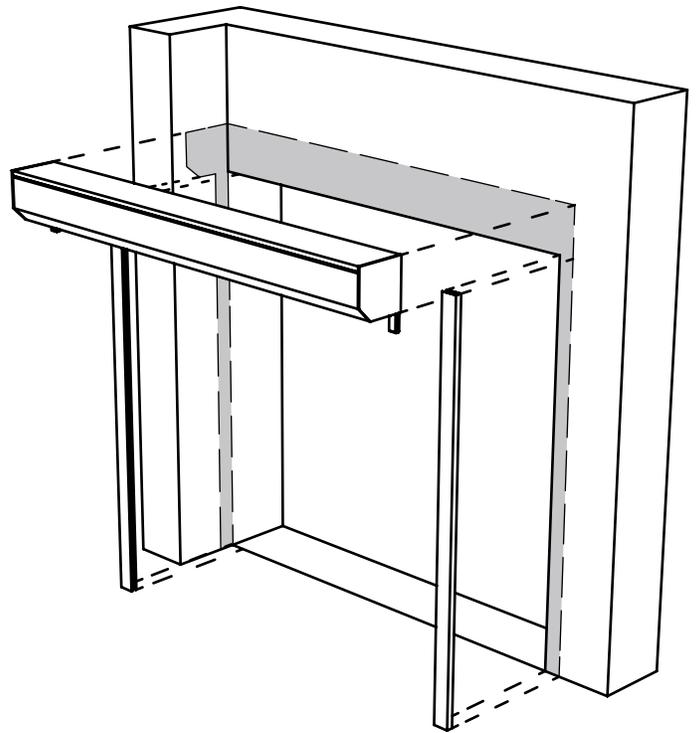

2. Ensure the entire mounting surface is completely flat. You will need the width of the guide rail (C) being mounted face of wall, the depth of the box housing and the guide rail being mounted between jamb, and the height of the box housing at the top of the opening.

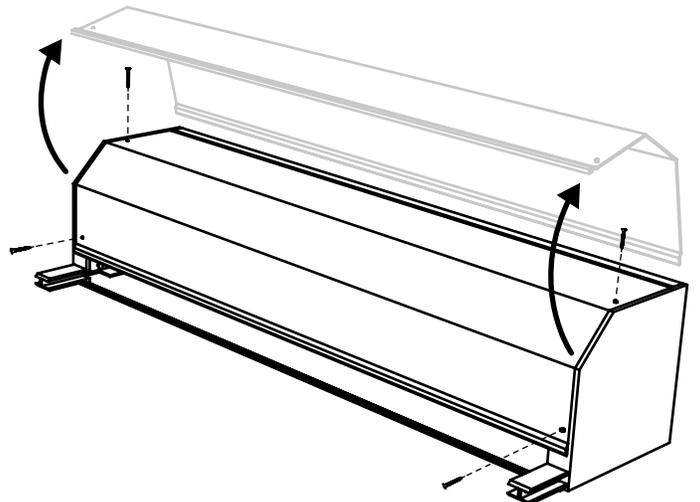

If necessary, remove the trim around the opening so the mounting surface is completely flat.

If your shutter has bottom bar upset:

You will need to allow the height of the box housing plus 3" above the opening (See step 2 on page 6 for description).

3. Using your #2 Robertson bit, remove the four screws that secure the cover lid to the box housing (A). Carefully remove the lid and store in a safe place until the final stage of the installation.

MOUNTING **2**

1. Mount the guide rails (C) to the sides of the opening face, using a level to ensure they are straight. The small mounting holes on the first guide rail go against the jamb (or wall). The large mounting holes on the other guide rail face frontwards (away from the opening).

Use the #10 - 2" screws (J1), and leave them slightly loose for adjustments in step 9.

If your shutter has a bottom bar lock:

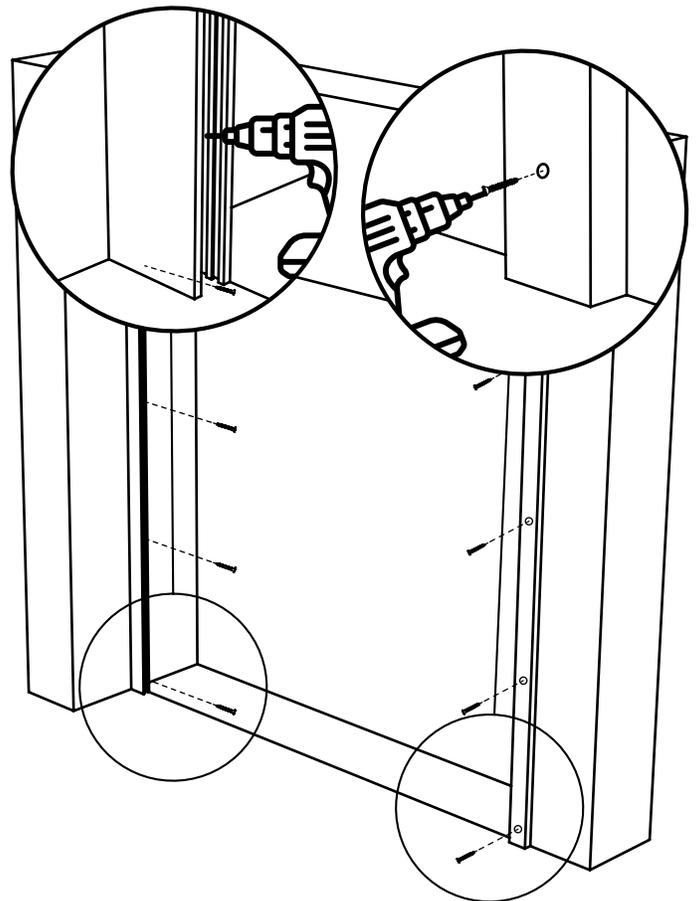

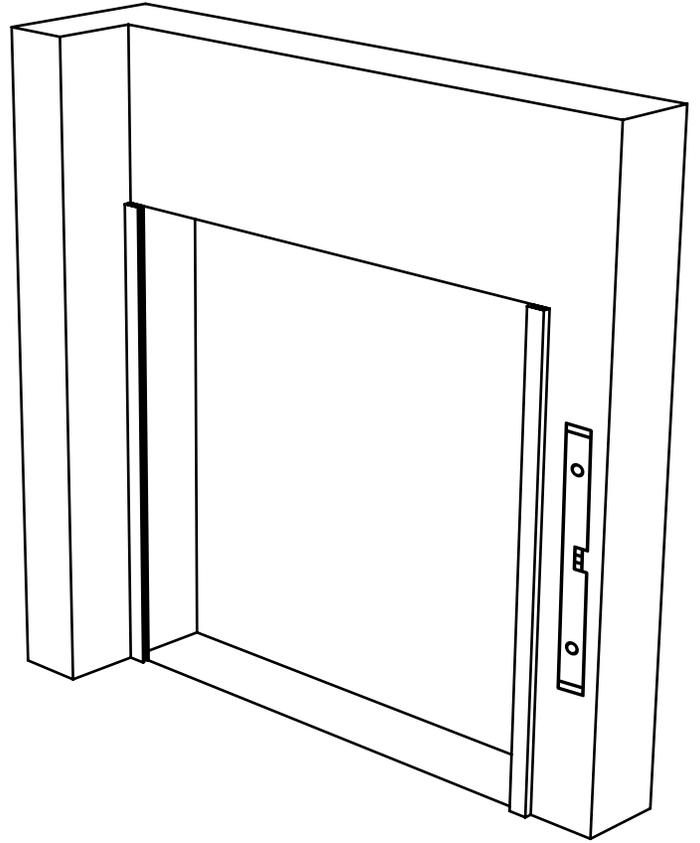

The end of the guide rail with the lock hole on the inside is the bottom.

If your shutter has support brackets:

The end of the guide rail with the threaded insert and screw is the top.

If your guide rails have flare outs:

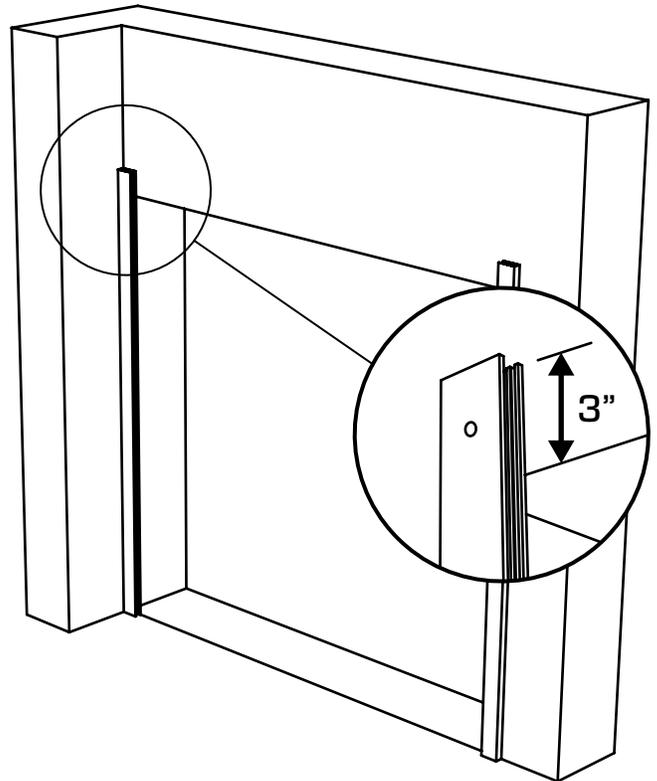

The end of the guide rail with the flare is the top.

SKIP THIS STEP IF YOUR SHUTTER DOES NOT HAVE BOTTOM BAR UPSET

2. On shutters with bottom bar upset, you must mount the guide rails (C) so that the top is 3 inches above the top of the opening.

Bottom bar upset is an option that allows the bottom bar to go above the lintel so that it does not hang down into the open when the shutter is in the open position.

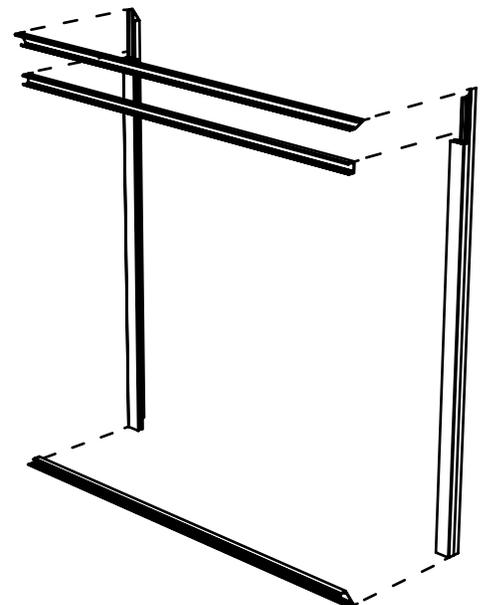

SKIP THIS STEP IF YOUR SHUTTER DOES NOT REQUIRE STAX (BUILDOUT)

3. Determine which faces of the shutter require STAX (G) (Horizontal and/or vertical faces).

Vertical STAX (if required) will be pre-attached to your guide rails (C).

Horizontal STAX (if required), should be mounted between the vertical STAX or miter the corners.

Mounting holes are pre-drilled in the STAX at 16" intervals. Use the #10 - 2" screws (J1) to secure the STAX to solid wood backing.

SKIP THIS STEP IF YOUR SHUTTER DOES NOT REQUIRE A SILL

Window or counter shutters with no sill (F) for the curtain to rest on when closed will need a sill installed. If a sill is required, it will be provided.

4. Mount sill (F) at the bottom of the guide rails (C).

If your shutter has a L-Sill:

Mount sill with one flange under the guide rails and the other in front of the guide rails facing up. Screw the tek screws (J2) through the front of the sill and into guide rails.

Or

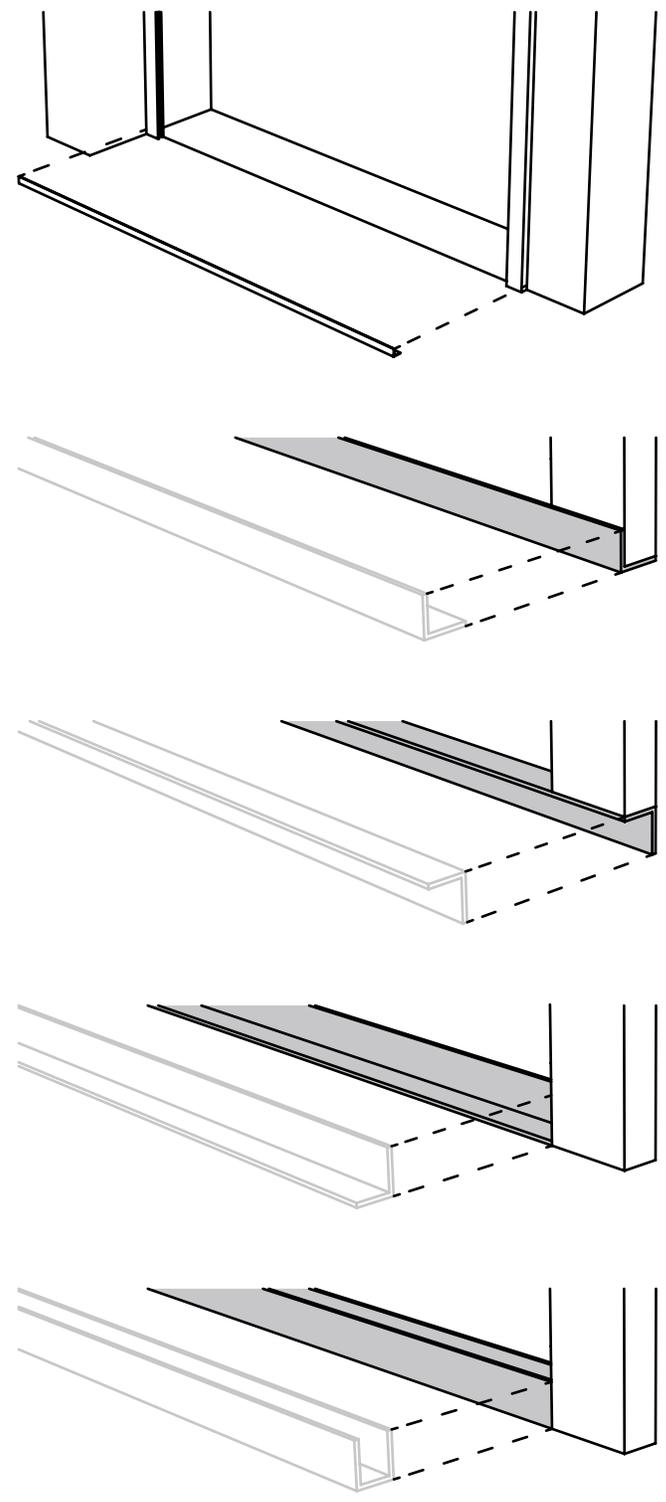

Mount sill with one flange under the guide rails and the other against the wall facing down. Scew the #10 - 2" screws (J1) through the sill and into the solid backing.

Or

Mount sill between the guide rails with one flange facing frontwards and the other against the wall facing up. Scew the #10 - 2" screws (J1) through the sill and into the solid backing.

If your shutter has a U-Sill:

Mount sill between the guide rails so the bottom of the sill is flush with the bottom of the guide rails. Screw the #10 - 2" screws (J1) through the sill and into the solid backing.

SKIP THIS STEP IF YOUR CURTAIN IS NOT PRE-INSTALLED IN BOX HOUSING

5. If you have a locking bottom bar:

Put the lock into the unlocked position.

6. Lift the box housing (A) up and into position over top of the guide rails (C). Lower the box housing onto the guide rails, sliding the box housing legs into the outside channel of the guide rails.

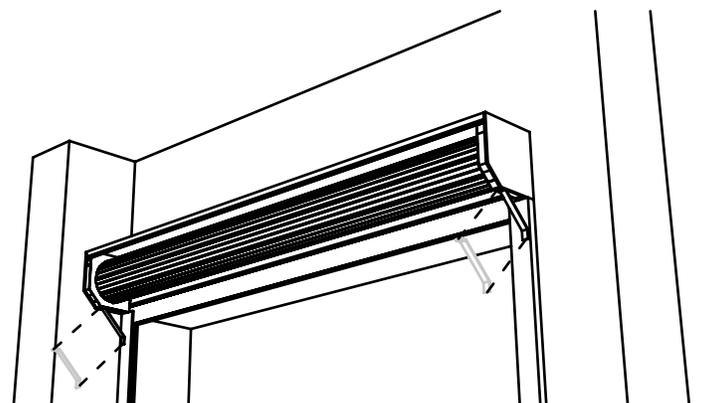

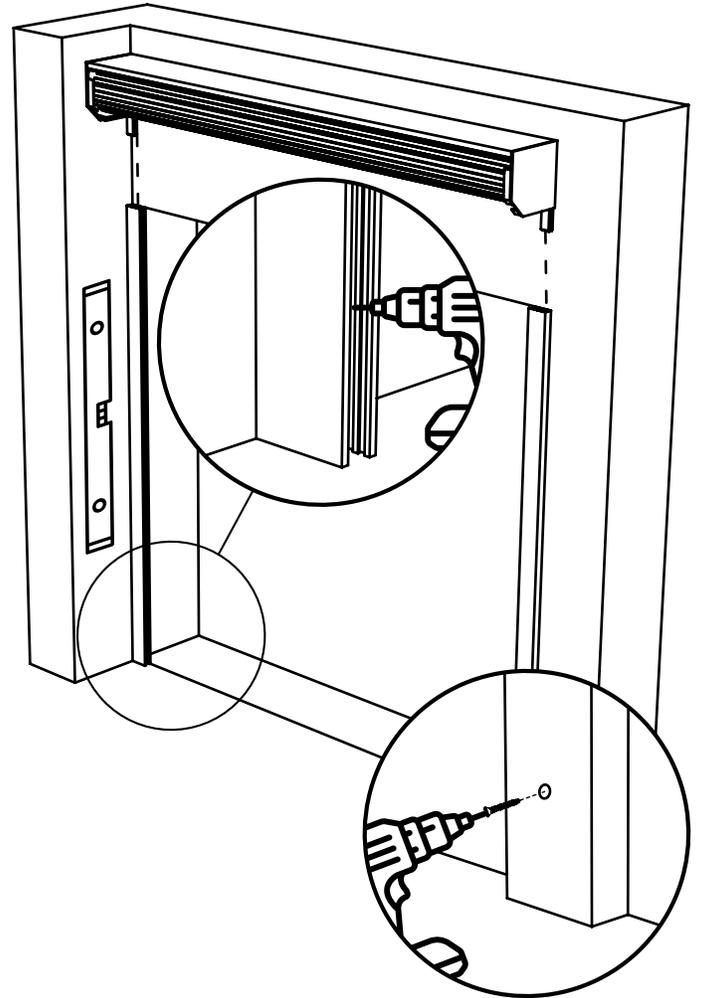

Important note:

Continue to hold the box housing firmly to avoid breaking the box housing legs.

7. Finish tightening the guide rail (C) mounting screws (J1), and ensure once again that the guide rails and box housing (A) are level.

8. If your shutter has support brackets:

Mount the support brackets (K) onto the bottom of the box housing (A) and the face of the guide rails (C) on each end of the shutter to protect the box housing legs. Use the tek screws (J2).

SKIP THIS STEP IF YOUR CURTAIN IS NOT PRE-INSTALLED IN BOX HOUSING

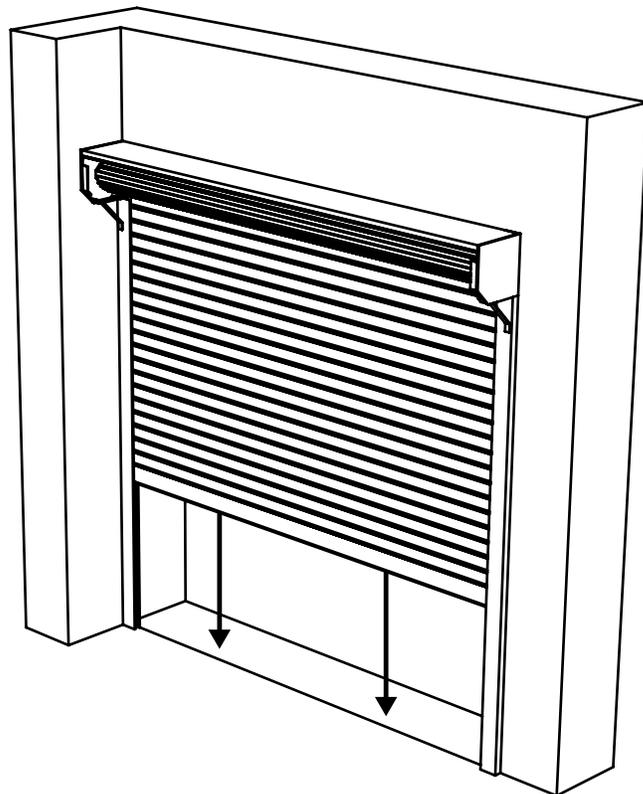

9. Carefully uncoil the curtain down into the guide rails (C) until it is in the closed position.

Refer to the motor programming instructions provided to get your shutter to operate.

Remove the protective foam wrapping on the curtain.

Important note:

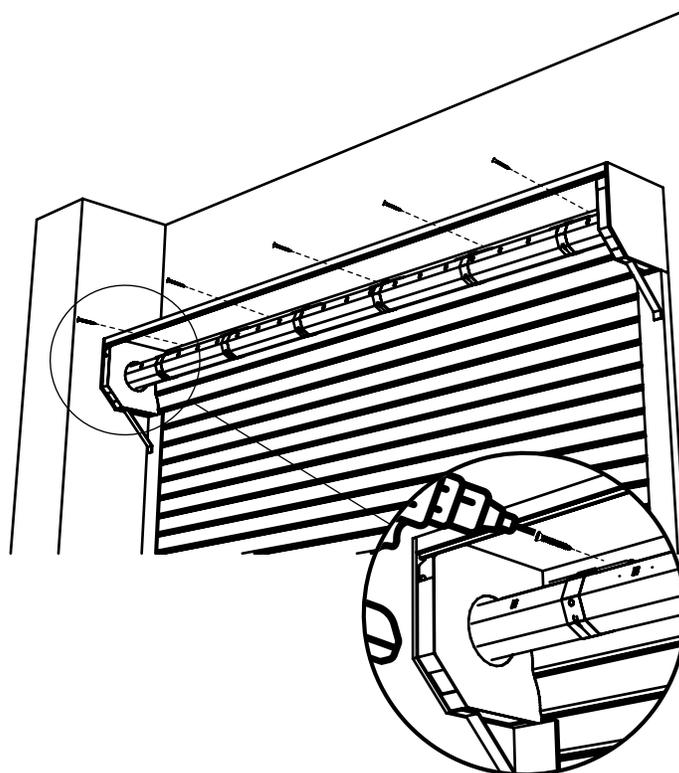

Ensure the box housing (A) is firmly supported to avoid breaking the box housing legs.

10. Mount the box housing (A) to solid backing with a screw at each end, and one screw every 16" across the width. Use the #10 - 2" screws (J1). Insert the screws through the back of the box housing.

If your shutter has support plates:

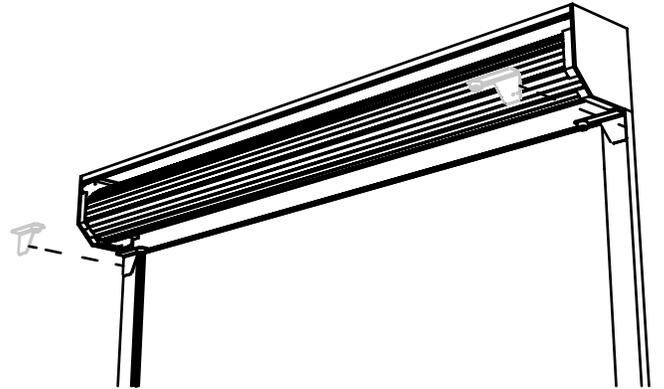

Large shutters have steel support plates on each end of the box housing. Insert the #10 - 2" screws (J1) through the 4 mounting holes on each plate, into solid backing.

SKIP THIS STEP IF YOUR SHUTTER HAS PRE-MOUNTED STOPPER BRACKETS

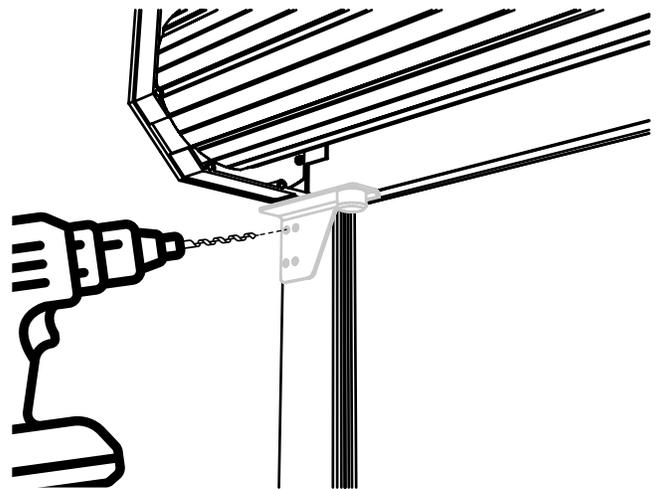

11. Mounting holes for the stopper brackets (L) need to be drilled in both guide rails (C) with your 1/8" drill bit.

Use the stopper brackets as a template to mark/drill the mounting holes on both guide rails.

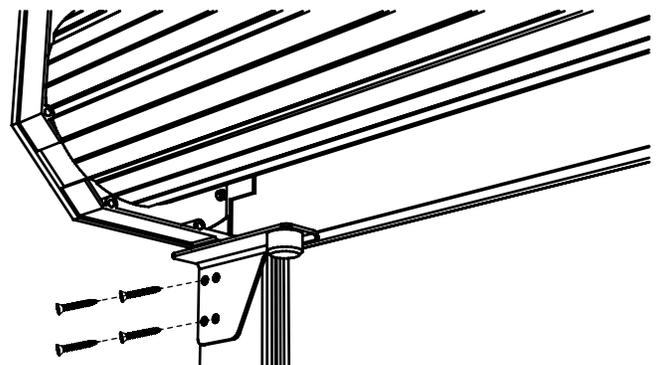

The standard location to mount the stopper brackets is at the top of the guide rails, beneath the box housing (A). However, you can mount them at your desired height, depending on where you want the curtain to stop when opening it during operation.

Use the self tapping screws (J3) provided to mount the stopper brackets.

Mount the stopper brackets so that their outside edge is flush with the outside edge of the guide rail.

An alternate mounting method is to drill 1/8" holes in the guide rails and use the #10 - 2" screws (J1) provided to fasten the brackets through the guide rails and into solid backing behind the shutter.

INSTALL CURTAIN **3**

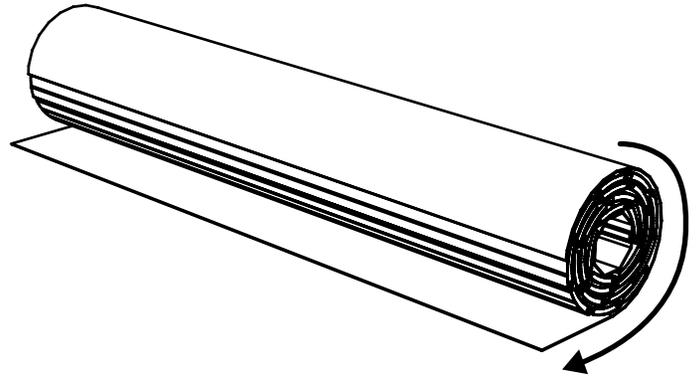

SKIP THIS STAGE IF YOUR CURTAIN IS PRE-INSTALLED IN THE BOX HOUSING

The shutter curtain is pre-installed into the box housing (A) if the weight of the curtain roll (B) is less than 60 pounds.

Warning: Bending the curtain backwards will cause damage (not covered by warranty).

1. Remove the protective foam wrapping around the curtain roll (B).

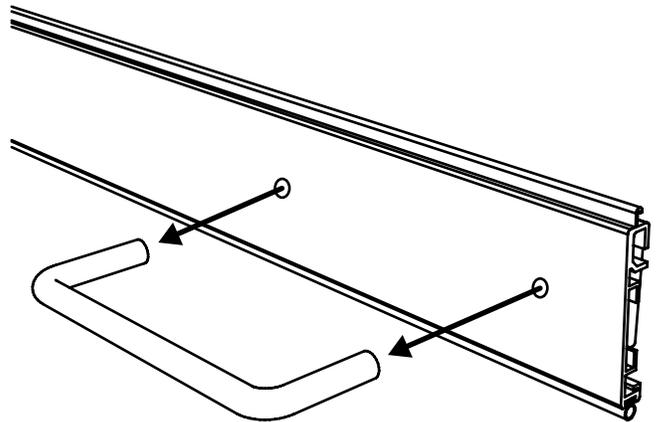

Unwrap the curtain roll and rewrap it the opposite way so the bottom bar (D) is on the outside of the curtain roll.

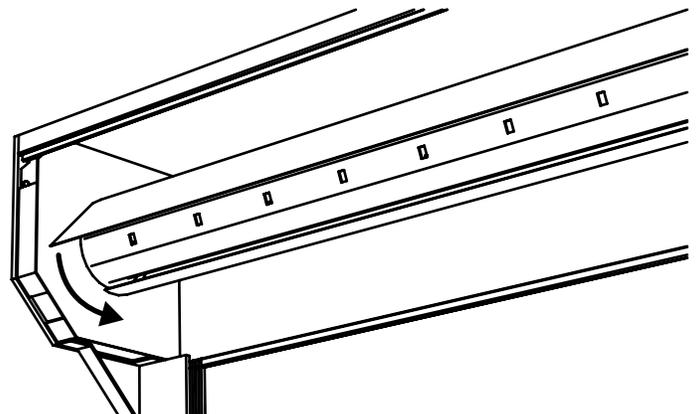

SKIP THIS STEP IF YOUR BOTTOM BAR DOES NOT HAVE D-PULL HANDLES

2. If your bottom bar (D) has handles on the flat side:

Remove the handles in order to slide the curtain and bottom bar over top of the axle (E) later in step 4.

3. Wrap the axle (E) in the box housing (A) with soft protective material, to avoid damaging the curtain during the next step.

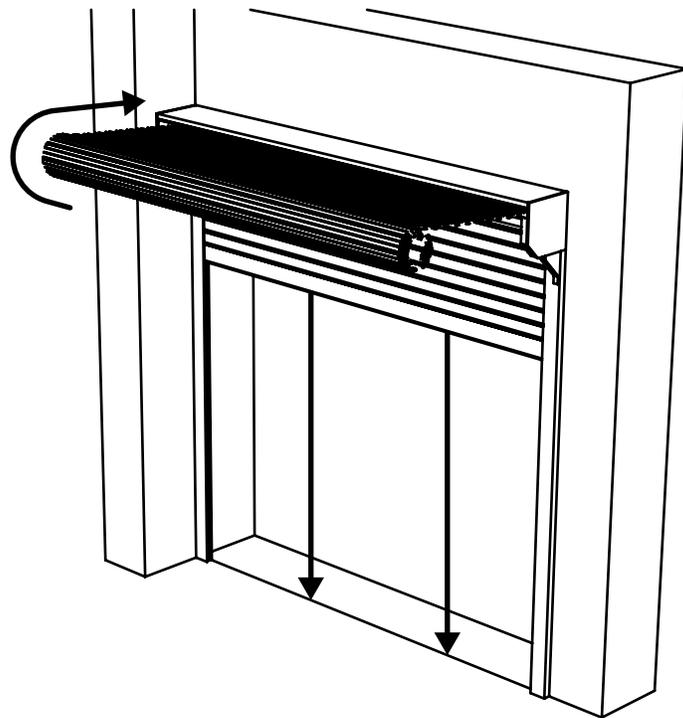

3

4. Lift the curtain into the box housing (A), feed it over top of the axle (E), and carefully uncoil the curtain down into the guide rails (C) until it is in the closed position and the bottom bar (D) is at the bottom.

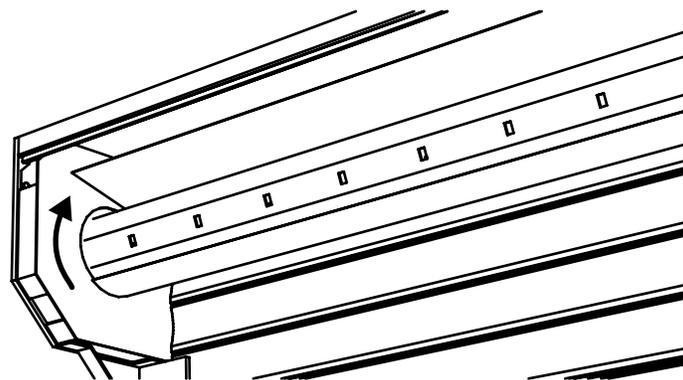

Ensure the curtain does not get scratched or damaged when uncoiling it into the guide rails.

Warning:

The curtain can be heavy. Ensure you have enough assistance to lift and hold the curtain, or use a lifting device.

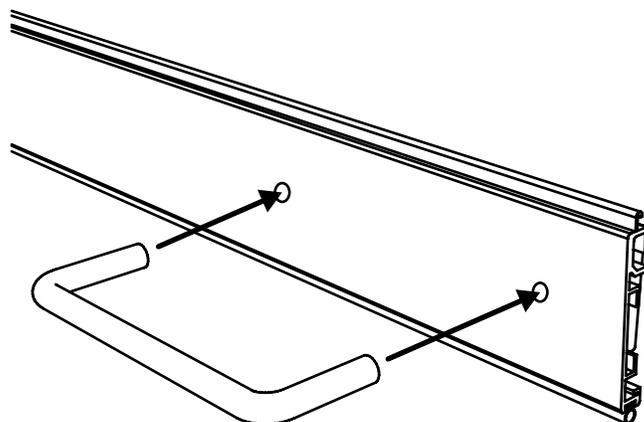

5. Remove the soft protective material you wrapped around the axle (E) in step 3 on the previous page.

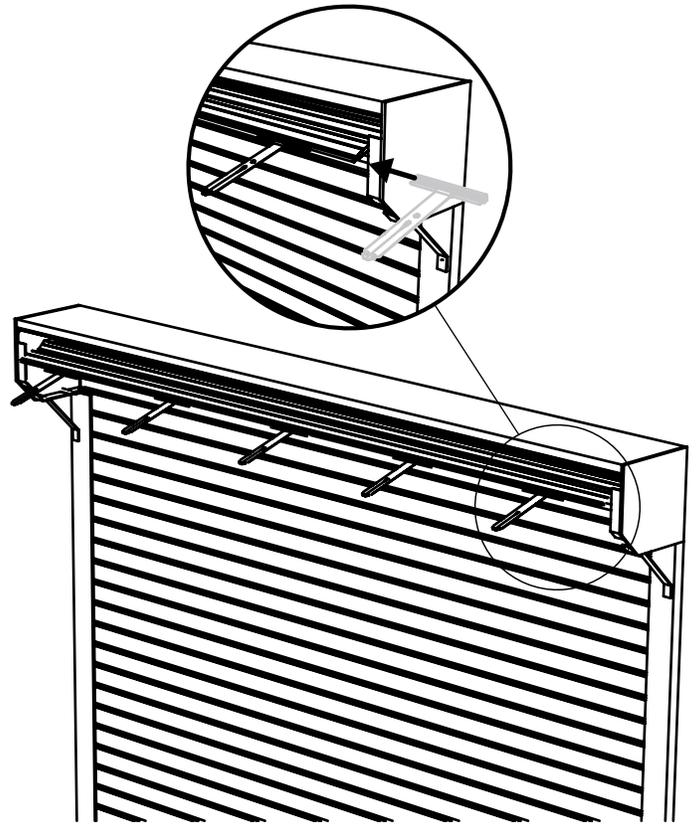

SKIP THIS STEP IF YOUR BOTTOM BAR DOES NOT HAVE D-PULL HANDLES

6. If your bottom bar (D) has handles on the flat side:
Replace the handles on the bottom bar that you removed in step 3.

7. Slide the t-clips (H) provided onto the top of the curtain. Evenly space them along the width of the curtain with the end ones 3" in from each end of the curtain.

These t-clips will be used to attach the curtain to the axle in step 9.

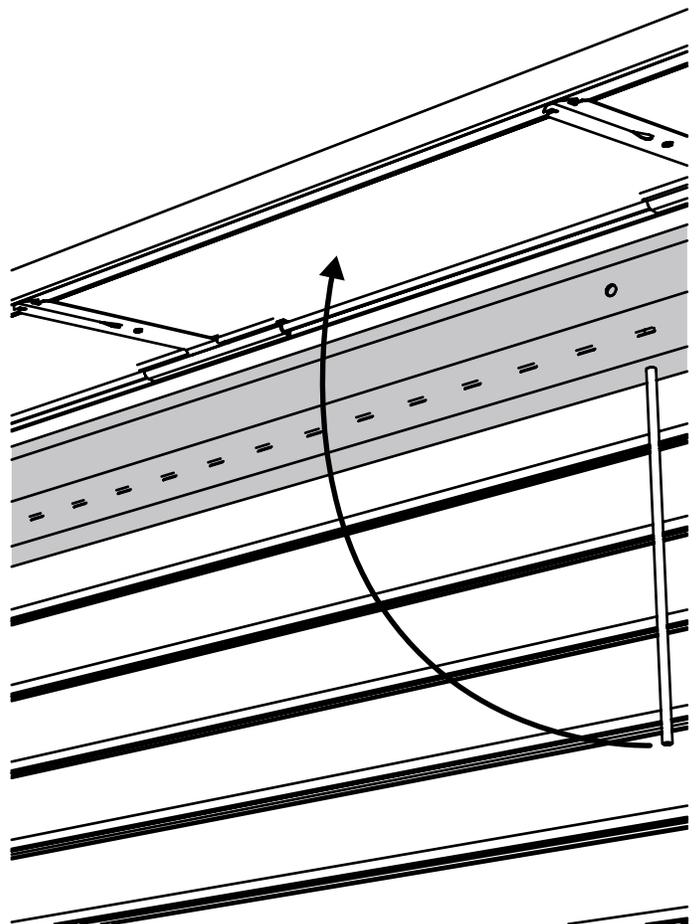

8. Before attaching the curtain to the axle (E) you must tension the axle spring by turning it with the charging handles provided.

The location to insert charging handles, the direction to turn the axle, and the number of turns to turn the axle is displayed on a label on the axle.

Insert the charging handles into the axle and turn the axle, to put tension on the spring.

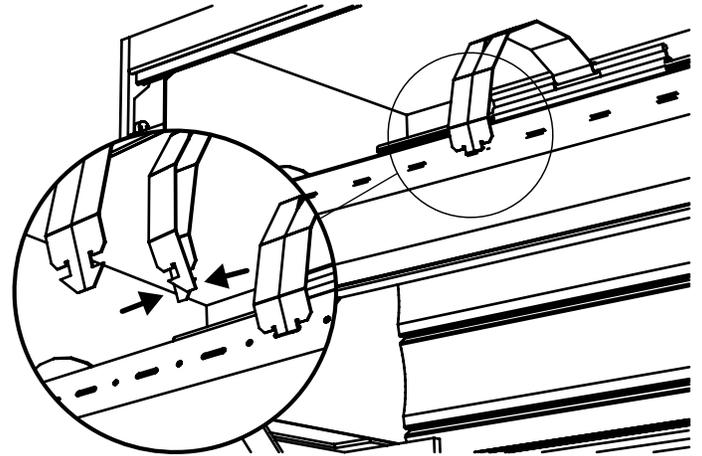

Use both handles to rotate the axle. Once the first one reaches the top, insert the second one into the next hole and continue turning the axle until the number of turns displayed on the label have been completed.

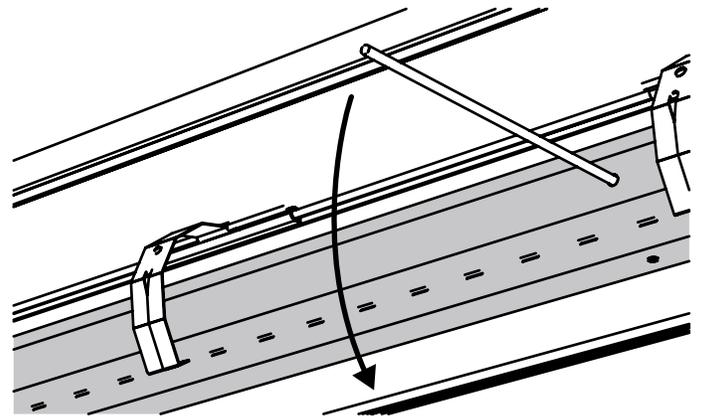

3

9. Attach the t-clips (H) onto the axle (E) by squeezing the arrow-shaped ends, and inserting them into the long narrow slots in the axle.

Ensure all of the t-clips are inserted into the same row of slots in the axle.

10. Using the charging handles, carefully rotate the axle (E) the opposite way, until you feel the spring tension transfer onto the curtain. Remove the charging handles and allow the curtain to coil up into the box housing (A).

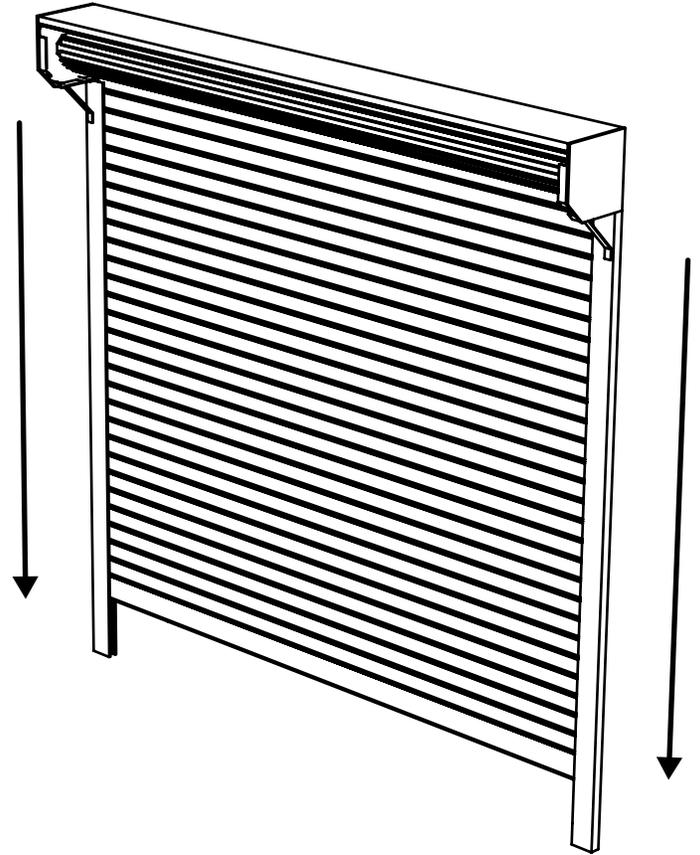

TESTING 4

1. The spring tension has been factory tested, and should now be set at the optimal position for operation.

Test the shutter operation by opening and closing it. You should be able to operate it easily with one hand.

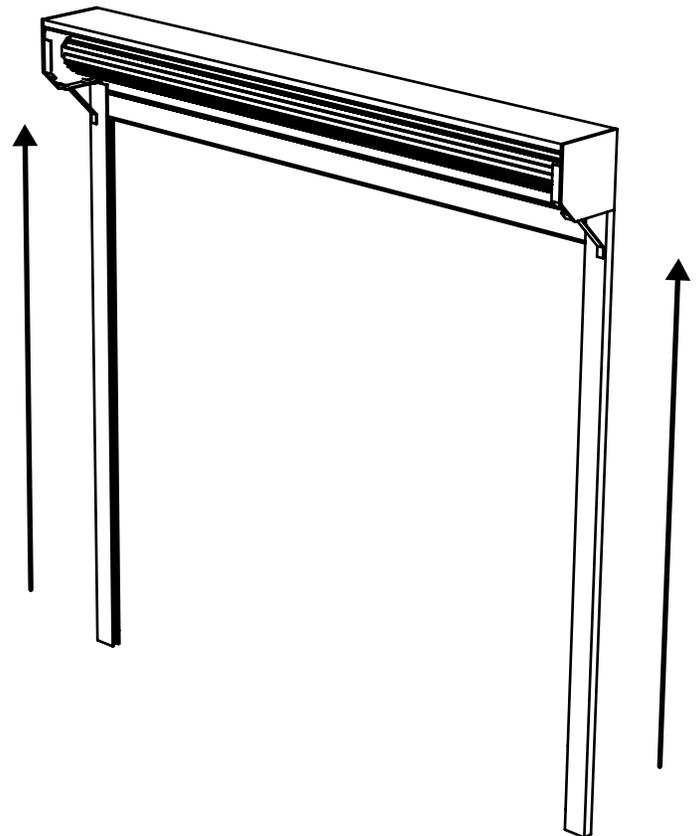

Closing the shutter:

When you pull the curtain down to close the shutter, it should stay by itself at (or near) the closed position.

Opening the shutter:

When you push the curtain up to open the shutter, the spring tension should pull the curtain open for the last 6" and stay by itself at (or near) the open position.

2. If you need to adjust the spring tension, follow the steps on the next page, stage 5.

5 ADJUSTING

SKIP THIS STAGE IF YOUR SHUTTER PERFORMED WELL IN THE TESTING STAGE

There are two adjustment options. Option 1 is needed if the shutter is too hard to close or opens too easily and hits the top hard. Option 2 is needed if the shutter is too hard to open, does not hold itself open, or closes with too much force (skip to page 18).

OPTION #1

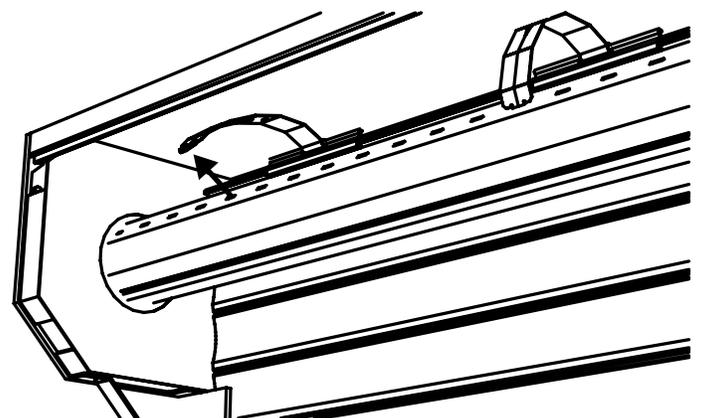

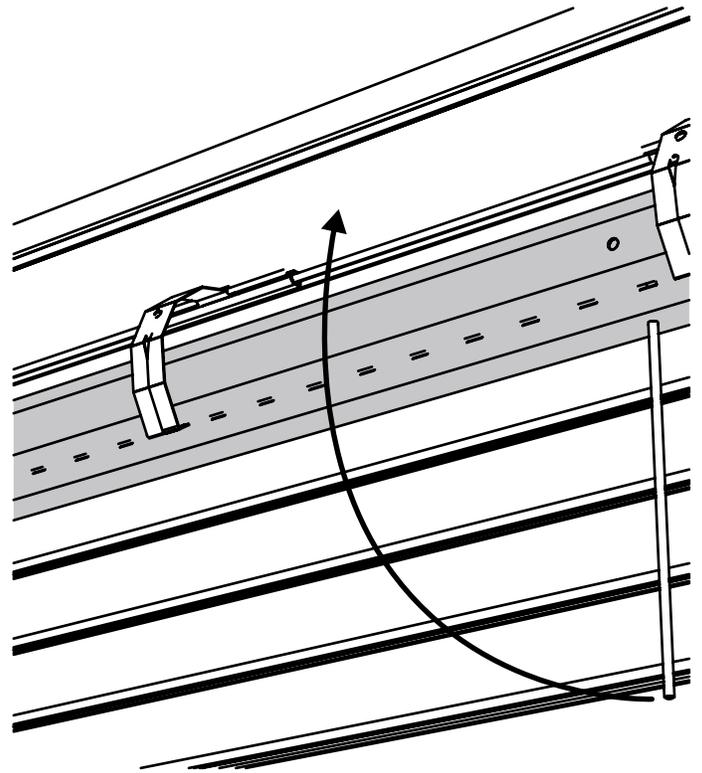

**The spring tension is likely too high.
Follow these steps to reduce tension:**

1. Put the curtain down into the closed position.
2. Insert the charging handles provided into the axle (E) to turn the axle.

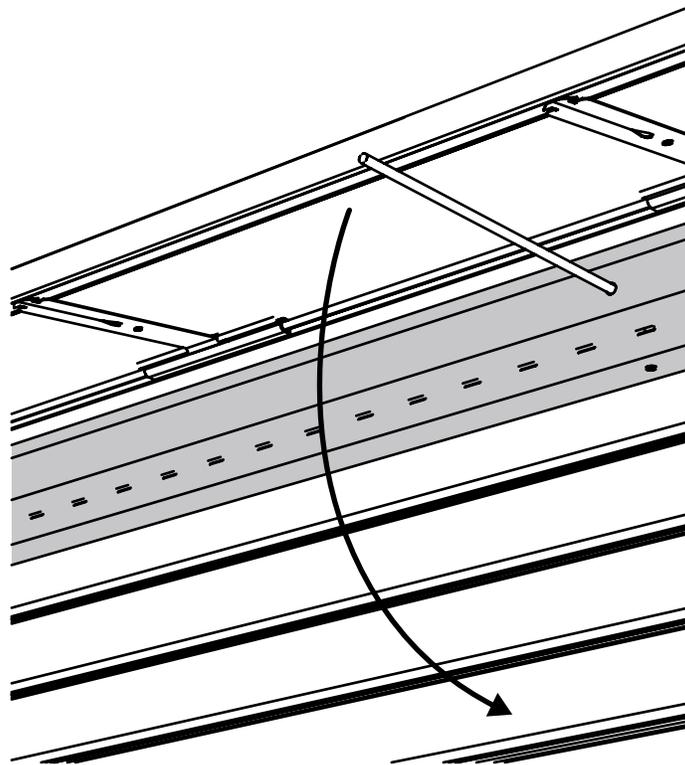

The location to insert charging handles is displayed on a label on the axle.

Use both handles to rotate the axle by moving the handles up from the curtain to the top of the box housing (A). Once the first one reaches the top, insert the second one into the next hole and continue turning. This should lower the curtain. Continue turning the axle until the top of the curtain comes away from the axle and the t-clips (H) are loose.

3. Detache the t-clips (H) from the axle (E).

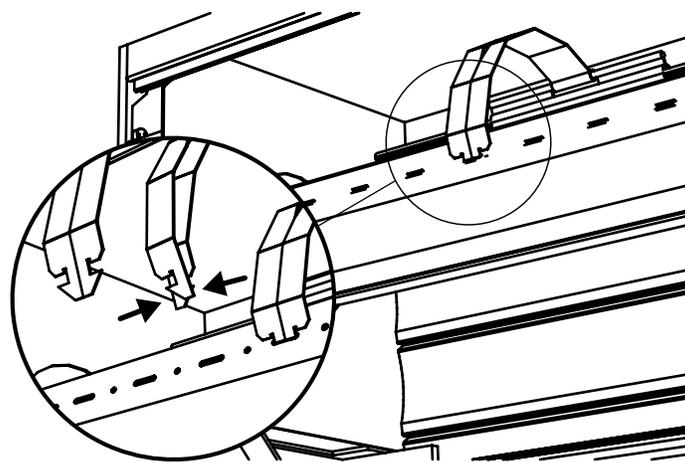

4. Insert the charging handles into the axle (E) again, and turn the axle the opposite way by moving the handles down from the top of the box housing (A) to the curtain. Continue turning the axle for one complete turn (360 degrees).

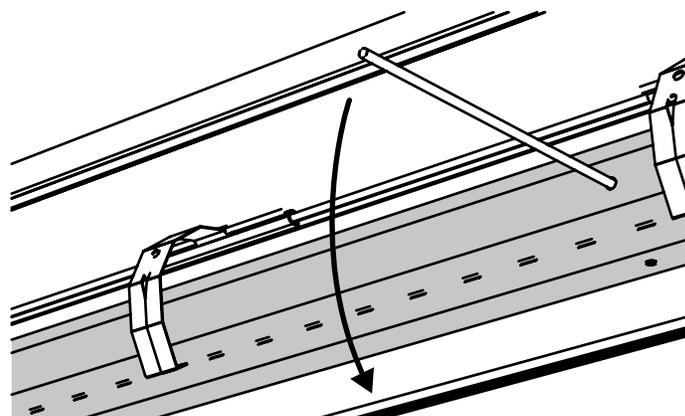

5. Reattach the t-clips (H) onto the axle (E) by squeezing the arrow-shaped ends, and inserting them into the long narrow slots in the axle.

Ensure all of the t-clips are inserted into the same row of slots in the axle.

6. Using the charging handles, carefully rotate the axle (E) the opposite way, until you feel the spring tension transfer onto the curtain. Remove the charging handles and allow the curtain to coil up into the box housing (A).

7. Return to stage 4 to test the shutter again.

5

OPTION #2

If the shutter is too hard to open, does not hold itself open, or closes with too much force.

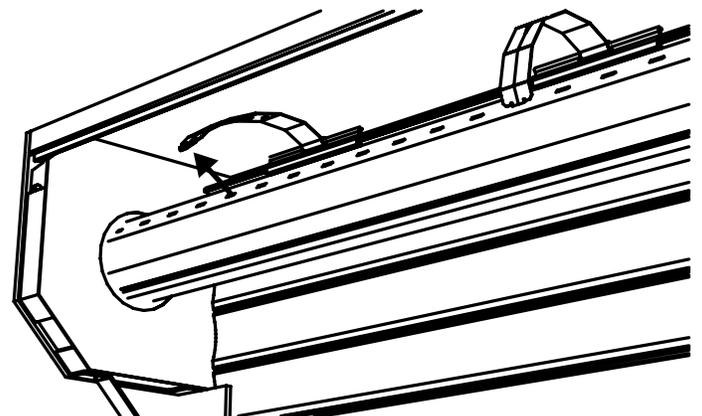

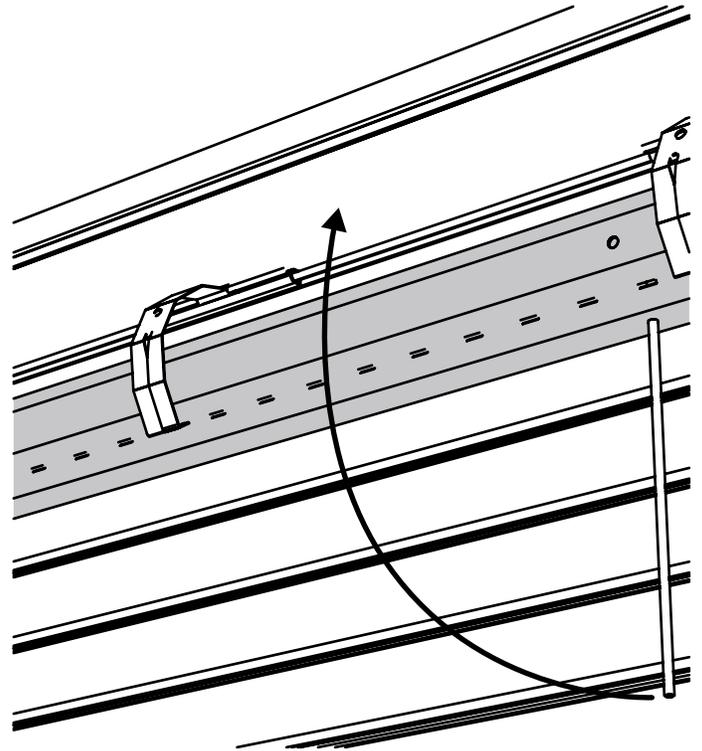

The spring tension may be too low.
Follow these steps to increase tension:

1. Put the curtain down into the closed position.
2. Insert the charging handles provided into the axle (E) to turn the axle.

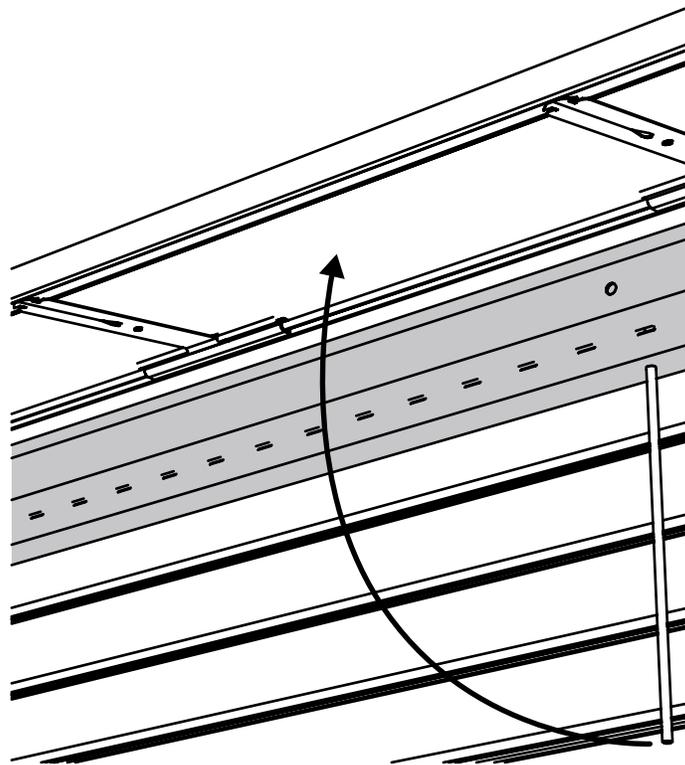

The location to insert charging handles is displayed on a label on the axle (E).

Use both handles to rotate the axle by moving the handles up from the curtain to the top of the box housing (A). Once the first one reaches the top, insert the second one into the next hole and continue turning. This should lower the curtain. Continue turning the axle until the top of the curtain comes away from the axle and the t-clips (H) are loose.

3. Detache the t-clips (H) from the axle (E).

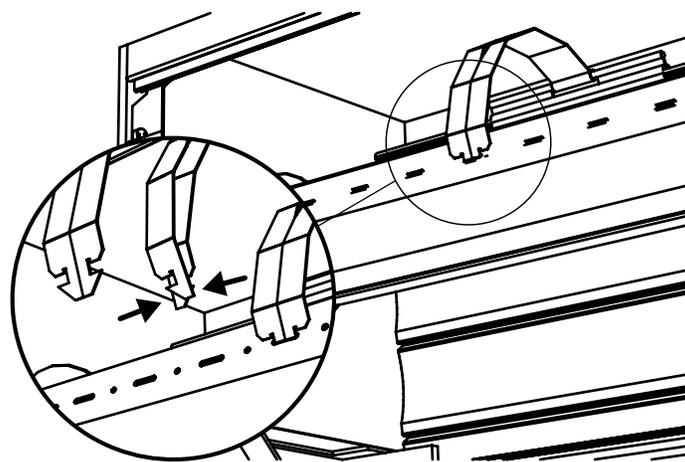

4. Insert the charging handles into the axle (E) again, and continue turning the axle by moving the handles up from the curtain to the top of the box housing (A). Turn the axle for one complete turn (360 degrees).

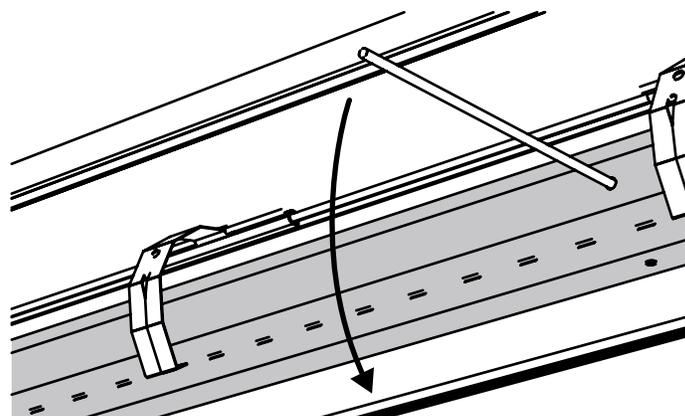

5. Reattach the t-clips (H) onto the axle (E) by squeezing the arrow-shaped ends, and inserting them into the long narrow slots in the axle.

Ensure all of the t-clips are inserted into the same row of slots in the axle.

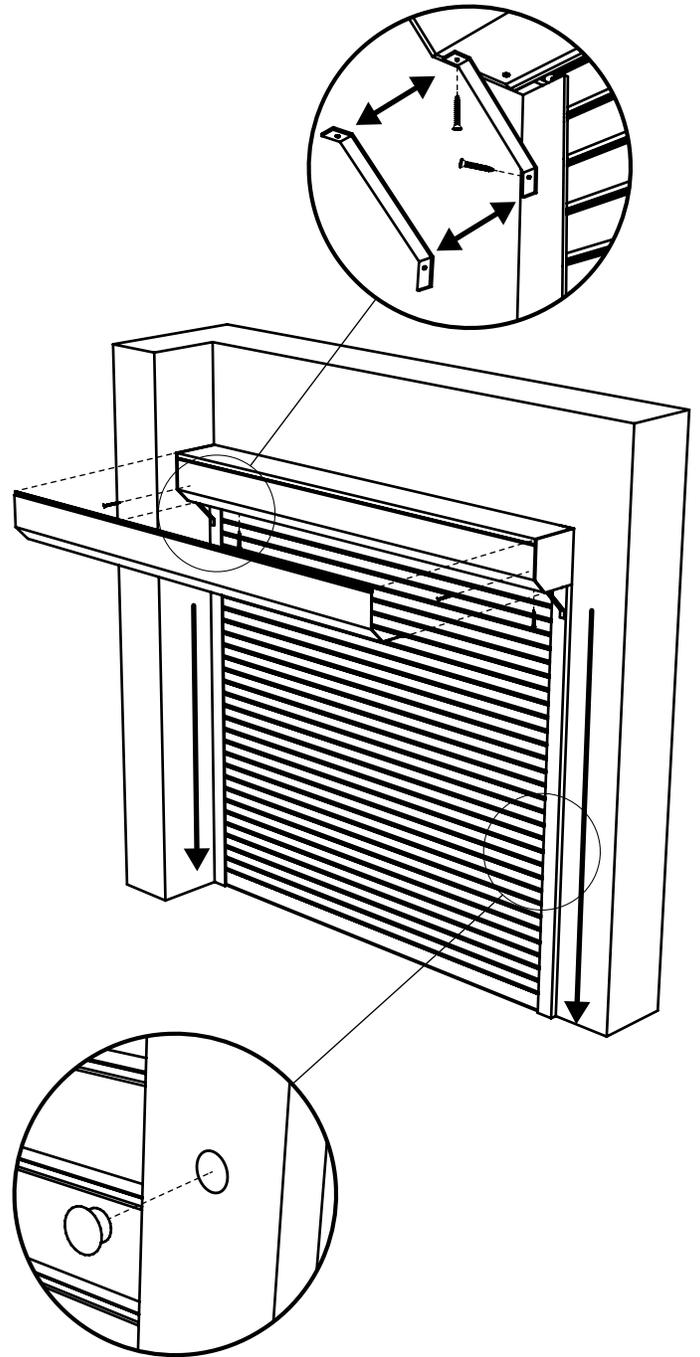

6. Using the charging handles, carefully rotate the axle (E) the opposite way until you feel the spring tension transfer onto the curtain. Remove the charging handles and allow the curtain to coil up into the box housing (A).

7. Return to stage 4 to test the shutter again.

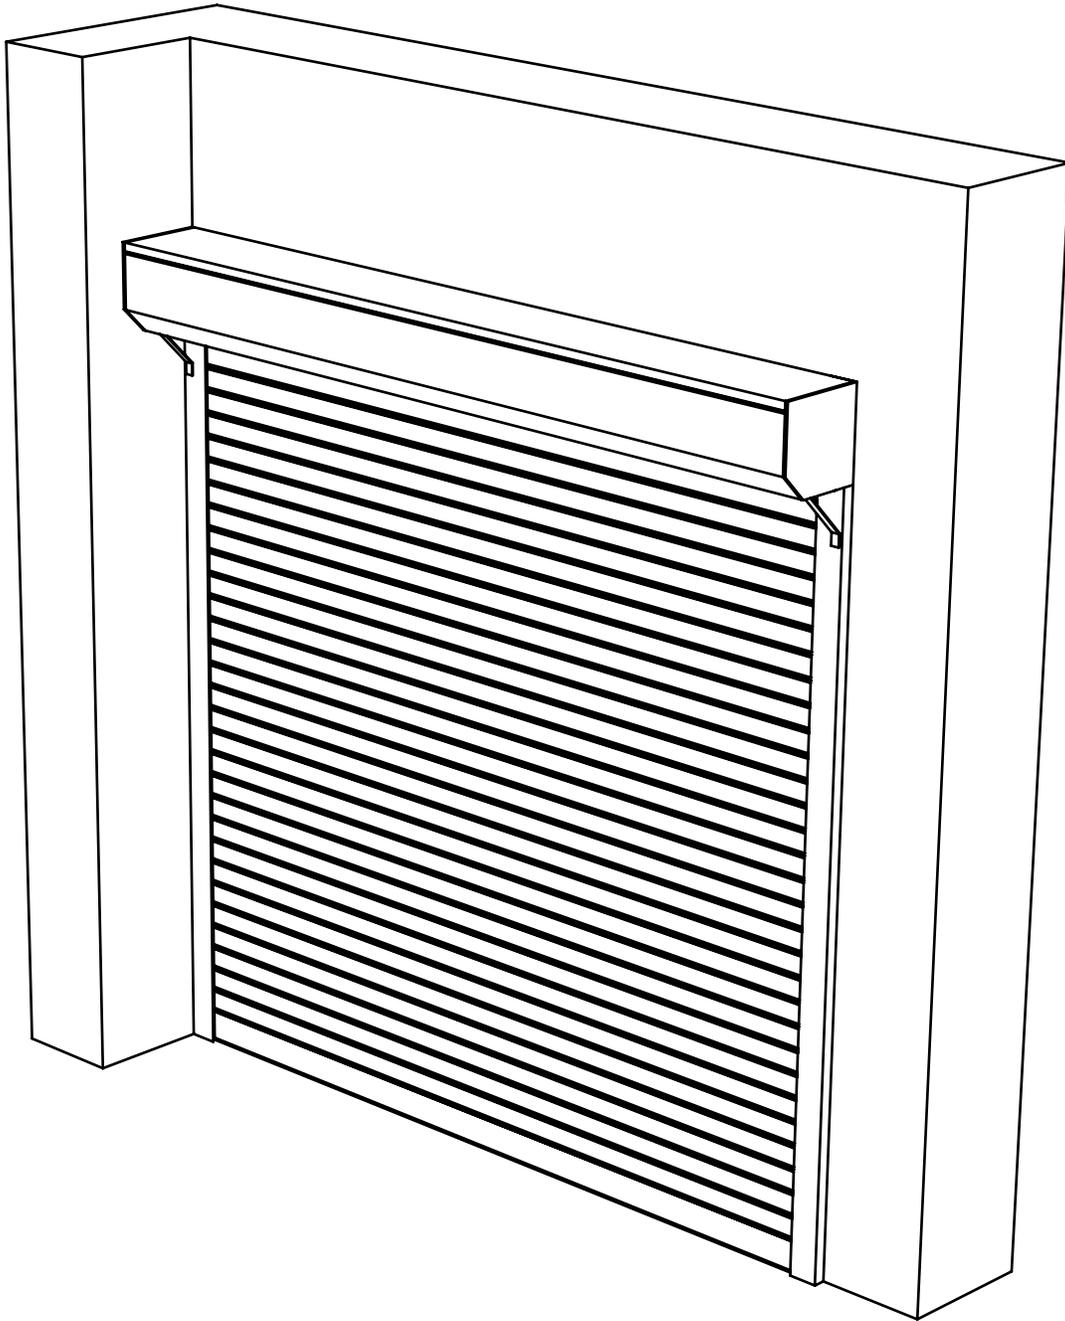

6 COMPLETE

1. Put the curtain down into the closed position.
2. **If your shutter has support brackets:**
Remove the support brackets (K) in order to complete the next step.
3. Replace the box housing (A) cover lid and secure it with the four screws you removed in stage 1 of the installation.
4. **If your shutter has support brackets:**
Replace the support brackets (K) you removed in step 2.
5. Put the screw hole covers (I) into the installation holes on the surface of the guide rails (C).
6. **If your shutter is installed outdoors:**
The shutter must be sealed to the wall. Put a good bead of suitable exterior caulking where the shutter meets the wall along the top and on both sides of the shutter.

YOU HAVE COMPLETED THE INSTALLATION OF YOUR DEFENDAGUARD SHUTTER, CONGRATULATIONS!

For technical support on the installation of your shutter, please contact Pentagon.
