

# SMC CONTROL WIRING DIAGRAM

### **WIRING INSTRUCTIONS (shown above)**

When looking at the back of the keypad connect the following terminals

1. The left relay, terminal #2 'C' to the 'SEQ' on the SMC
2. The left relay, terminal #1 'NO' to the 'GND' on the SMC
3. The center keypad power supply, terminal #2 to the 'GND' on the SMC
4. The center keypad power supply, terminal #1 to the '+12' on the SMC

### **PROGRAMMING INSTRUCTIONS**

To test and confirm that the keypad would operate the shutter, user # 3 has been set to operate the shutter. Each code can be one to eight characters and must be followed by the '\*' key to activate the keypad.

The code is set to 4367. To operate the shutter up, press '4367\*'

To add more user's and their corresponding codes follow the instructions on page four of the following instructions to add, change, or delete users.

All user #'s and their codes should be recorded on the provided sheet at the end of the programming instructions.

When programming the keypad please note that any characters inside square brackets [] must be pressed and released at the same time.

To enter user #4 with a code of 6789, you would press the following:

1. Enter programming mode by pressing [1\*] followed by '1234\*'. The green LED light will turn on showing that the master code has been accepted.
2. To add user #4 and the code press: [2\*] followed by '4, #, 6789\*, 6789\*'.  
3. To exit the programming mode press '\*##'
